4.5.1 Language of Sequences & Series

Your notes

Language of Sequences & Series

What is a sequence?

A sequence is an ordered set of numbers with a rule for finding all the numbers in the sequence

THE RULE COULD BE GIVEN AS:
"START AT 1. EVERY NUMBER AFTER THAT IS
THREE MORE THAN THE NUMBER BEFORE IT"

Copyright © Save My Exams. All Rights Reserved

- The numbers in a sequence are called **terms**
- The terms of a sequence are often referred to by letters with a subscript

THE GENERAL TERM OF THE SEQUENCE WOULD BE $u_n \! = \! 3n \! - \! 2$

Copyright © Save My Exams. All Rights Reserved

What is a series?

• You get a **series** by summing up the terms in a sequence

 $Head \, to \, \underline{www.savemyexams.com} \, for \, more \, awe some \, resources \,$

e.g. FOR THE SEQUENCE 1, 4, 7, 10, 13, ...

THE ASSOCIATED SERIES IS 1+4+7+10+13+...

Copyright © Save My Exams. All Rights Reserved

• We use the notation S_n to refer to the sum of the first n terms in the series ie. $S_n = u_1 + u_2 + u_3 + ... + u_n$

SO FOR THE SERIES ABOVE

$$S_{1} = 1$$

$$S_{2} = 1+4=5$$

$$S_{3} = 1+4+7=12$$

$$S_{4} = 1+4+7+10=22$$

$$S_{5} = 1+4+7+10+13=35$$

Increasing, decreasing and periodic sequences

- A sequence is **increasing** if $u_{n+1} > u_n$ for all positive integers n ie if every term is greater than the term before it
- A sequence is **decreasing** if $u_{n+1} < u_n$ for all positive integers n ie if every term is less than the term before it

e.g.

3, 7, 11, 15, 19, ... IS AN INCREASING SEQUENCE
64, 32, 16, 8, 4, ... IS A DECREASING SEQUENCE
1, -2, 3, -4, 5, ... IS NEITHER AN INCREASING NOR
A DECREASING SEQUENCE

- A sequence is **periodic** if the terms repeat in a cycle
- The order (or period) of a periodic sequence is the number of terms in each repeating cycle

 $Head \ to \underline{www.savemyexams.com} \ for \ more \ awe some \ resources$

e.g.

1, 2, 3, 1, 2, 3, 1, 2, 3, ... IS A PERIODIC SEQUENCE OF ORDER 3 2,-2, 2, -2, 2, -2, ... IS A PERIODIC SEQUENCE OF ORDER 2 0, 0, 0, 0, 0, 0, 0, ... IS A PERIODIC SEQUENCE OF ORDER 1

Copyright © Save My Exams. All Rights Reserved

Examiner Tip

Look out for sequences defined by trigonometric functions – this can be a way of 'hiding' a periodic function.

 $u_n = \cos(180n^\circ)$

 $u_1 = \cos(180^\circ) = -1$

 $u_2 = \cos(360^\circ) = 1$

 $u_3 = \cos(540^\circ) = -1$

 $u_4 = \cos(720^\circ) = 1$

THIS IS THE SEQUENCE -1,1,-1,1,-1,1,... (i.e. A PERIODIC SEQUENCE OF ORDER 2)

Worked example

Determine the order of the following periodic functions

a)
$$u_n = 3 + (-1)^n$$

$$b) u_n = \sin(90n^\circ)$$

WORK OUT THE TERMS AND LOOK FOR A PATTERN

```
a) u_4 = 3 + (-1)^4 = 3 - 1 = 2
```

$$u_2 = 3 + (-1)^2 = 3 + 1 = 4$$

$$u_3 = 3 + (-1)^3 = 3 - 1 = 2$$

$$u_4 = 3 + (-1)^4 = 3 + 1 = 4$$

THE SEQUENCE IS 2,4,2,4,2,4,...

PERIODIC WITH ORDER 2

b)
$$u_1 = \sin 90^\circ = 1$$
 $u_2 = \sin 180^\circ = 0$

$$u_3 = \sin 270^\circ = -1$$
 $u_4 = \sin 360^\circ = 0$

$$u_5 = \sin 450^\circ = 1$$
 $u_6 = \sin 540^\circ = 0$

$$u_7 = \sin 630^\circ = -1$$
 $u_8 = \sin 720^\circ = 0$

SEQUENCE IS 1,0,-1,0,1,0,-1,0,...

PERIODIC WITH ORDER 4

BE CAREFUL HERE. EVERY SECOND TERM IS A ZERO, BUT IT TAKES FOUR TERMS FOR THE PATTERN TO REPEAT

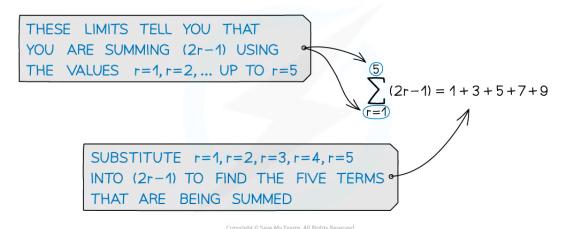

4.5.2 Sigma Notation

Your notes

Sigma Notation

What is sigma notation?

- The symbol Σ is the capital Greek letter sigma that's why it's called 'sigma notation'!
- ' Σ ' stands for 'sum' the expression to the right of the Σ tells you what is being summed, and the limits above and below tell you which terms you are summing

Ssave my exams

- Be careful the limits don't have to start with 1!
 - For example: $\sum_{r=0}^{4} (2r+1) \text{ or } \sum_{r=7}^{11} (2r-13)$

What do I need to be able to do with sigma notation?

- Sigma notation can be used to represent both **arithmetic series** and **geometric series**
 - Arithmetic will have the form A + Br
 - lacksquare Geometric will have the form $A imes B^r$
 - Writing out the first few terms will help you

$$\sum_{r=1}^{5} (5r+1) = 6 + 11 + 16 + 21 + 26$$

THIS IS THE SUM OF THE FIRST FIVE TERMS OF THE ARITHMETIC SERIES WITH FIRST TERM 6 AND COMMON DIFFERENCE 5

$$\sum_{r=1}^{5} (4 \times 3^r) = 12 + 36 + 108 + 324 + 972$$

THIS IS THE SUM OF THE FIRST FIVE TERMS OF THE GEOMETRIC SERIES WITH FIRST TERM 12 AND COMMON RATIO 3

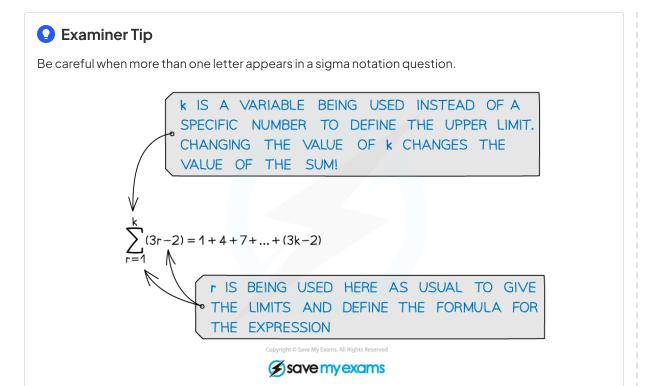

- To work out such a sum use the arithmetic and geometric series formulae
- As long as the expressions being summed are the same you can add and subtract in sigma notation
 - For example:

$$\sum_{r=1}^{6} (4r+7) + \sum_{r=7}^{11} (4r+7) = \sum_{r=1}^{11} (4r+7)$$

$$\sum_{r=1}^{100} (7 \times 2^r) - \sum_{r=1}^{50} (7 \times 2^r) = \sum_{r=51}^{100} (7 \times 2^r)$$

Head to www.savemyexams.com for more awesome resources

 $Head \, to \, \underline{www.savemyexams.com} \, for \, more \, awe some \, resources \,$

Worked example	

Evaluate:

a)
$$\sum_{r=50}^{99} (2r+1)$$

b)
$$\sum_{r=k-4}^{12} (3 \times 4^r)$$
 when $k = 7$

"EVALUATE" HERE MEANS "FIND THE VALUE OF"

THIS IS THE SUM 101 + 103 + 105 + ... + 199
 ARITHMETIC SERIES WITH a=101, d=2, AND LAST TERM L=199

$$S_{50} = \frac{50}{2}(101 + 199) = 7500$$

BE CAREFUL HERE! THERE ARE 50 NUMBERS (NOT 49) FROM r=50 TO r=99. SO n=50

b) FOR k=7 THIS IS

$$\sum_{r=3}^{12} (3 \times 4^r) = 3 \times 4^3 + 3 \times 4^4 + 3 \times 4^5 + \dots + 3 \times 4^{12}$$
$$= 3 \times 4^3 + 4(3 \times 4^3) + 4^2(3 \times 4^3) + \dots + 4^9(3 \times 4^3)$$
$$= 192 + 4(192) + 4^2(192) + \dots + 4^9(192)$$

THAT IS THE FIRST 10 TERMS OF THE GEOMETRIC SERIES WITH a=192 AND r=4

$$S_{10} = \frac{192 (4^{10} - 1)}{4 - 1} = 67 108 800$$

 $Head to \underline{www.savemyexams.com} for more awe some resources$

BE CAREFUL! THIS r IS THE COMMON RATIO OF THE GEOMETRIC SERIES.

IT IS DIFFERENT FROM THE r IN THE SIGMA NOTATION.

Head to www.savemyexams.com for more awesome resources

4.5.3 Recurrence Relations

Your notes

Recurrence Relations

What do I need to know about recurrence relations?

- A recurrence relation describes each term in a sequence as a function of the previous term ie $u_{n+1} = f(u_n)$
- Along with the first term of the sequence, this allows you to generate the sequence term by term
 - e.g. FIND THE FIRST FOUR TERMS OF THE SEQUENCE DEFINED BY $u_{n+1} = u_n + 3, \ u_1 = 2$

$$u_4=2$$
 $u_2=u_4+3=2+3=5$
 $u_3=u_2+3=5+3=8$
 $u_4=u_3+3=8+3=11$

THE FIRST FOUR TERMS ARE 2,5,8,11

- Both arithmetic sequences and geometric sequences can be defined using recurrence relations
 - Arithmetic can be defined by $u_{n+1} = u_n + d$, $u_1 = a$
 - Geometric can be defined by $u_{n+1} = u_n \times r$, $u_1 = a$

$$u_{n+1} = u_n - 5$$
, $u_1 = 9$

THIS IS THE SEQUENCE 9,4,-1,-6,-11,...

(i.e. ARITHMETIC SEQUENCE WITH FIRST TERM 9 AND COMMON DIFFERENCE -5)

$$u_{n+1} = 2u_n, u_1 = 3$$

THIS IS THE SEQUENCE 3, 6, 12, 24, 48, ...

(i.e. GEOMETRIC SEQUENCE WITH FIRST TERM 3 AND COMMON RATIO 2)

Copyright © Save My Exams, All Rights Reserved

However, you can also define sequences that are neither arithmetic nor geometric

$$u_{n+1} = 2u_n + 3$$
, $u_4 = 1$

THIS IS THE SEQUENCE 1,5,13, 29, 61, ... (DON'T CONFUSE THIS WITH ARITHMETIC SEQUENCE 5,7,9,11, ... DEFINED BY $u_n = 2n + 3$)

$$u_{n+1} = (u_n)^2, u_1 = 2$$

THIS IS THE SEQUENCE 2, 4, 16, 256, 65 536, ...

 $Head \, to \, \underline{www.savemyexams.com} \, for \, more \, awe some \, resources \,$

Examiner Tip

- For arithmetic or geometric sequences defined by recurrence relations, you can sum the terms using the **arithmetic series** and **geometric series** formulae.
- To sum up the terms of other sequences, you may have to think about the series and find a clever trick.

Worked example

A sequence u_1, u_2, u_3, \dots is defined by

$$u_1 = 2$$

$$u_{n+1} = u_n^2 - 3$$

Find
$$\sum_{r=1}^{101} u_r$$

$$u_1 = 2$$
 $u_2 = 2^2 - 3 = 1$ $u_3 = 1^2 - 3 = -2$ $u_4 = (-2)^2 - 3 = 1$ $u_5 = 1^2 - 3 = -2$

WORK OUT THE TERMS AND LOOK FOR A PATTERN

IN THE FIRST 101 TERMS THERE WILL BE

FIFTY 1's
$$50 \times 1 = 50$$

FIFTY
$$-2$$
's $50 \times (-2) = -100$

$$2+50+(-100)=-48$$

SO
$$\sum_{r=1}^{101} u_r = -48$$
